LANDSCAPE FOUNDATION STUDENTS' DESIGN COMPETITION 2017

PAST CONTINUOUS IS FUTURE PERFECT

Landscape Foundation Students' Design Competition has evolved and traversed a long journey in the last ten years {starting in 2008} with each year bringing new perspectives to the environment around us and at the same time, it also culminates with lessons of learning, refining and maturing for the Foundation itself. This year the theme firstly drew attention towards the heritage and historic context, and secondly towards the contemporary and functional aspect. Students could explore spaces around monuments and heritage sites. More explicitly, it provoked re-imagining of heritage precincts that either fall within the purview of State or Center Archaeology or are derelict or ill designed. Various students across the country worked on diverse and multi-scaler sites - historic parks, areas around monuments, traditional water harvesting structures and routes, old towns and settlements and cultural landscapes on regional levels to address the theme in multiple ways.

10TH
YEAR

The panel of jurors comprised of professionals who could independently as well as collectively look into heritage architecture, urban issues and landscape design for public spaces. One was left enriched by the threads of ideas/dialogues that the competition brought to light which can be woven into studio discussions and lectures in the near future. The theme was put across in three relevant formats: lessons to learn in architectural education with reference to conservation and design, academics versus practice, and lastly questioning if competitions are the bridge to stride across boundaries. Although all winning entries were independent in their approach, the jury felt that two relevant aspects underlined the approach in which the first binding factor was born out of context and the second binding factor was the formlessness which could also be framed as ingrained wisdom rather than an image. It unanimously disapproved on entries that presented a strong image of how landscape was to be done and dealt with.

- NUMBER OF ENTRIES RECEIVED: 39
- JURY MEET: 25TH OCTOBER, 2017 at JAMIA MILLIA ISLAMIA, NEW DELHI

A G Krishna Menon is an architect, urban planner and conservation consultant practicing in Delhi for over four decades. He has been simultaneously teaching in Delhi and in 1990 co-founded the TVB School of Habitat Studies in New Delhi. He is actively engaged in research and his contributions have been extensively published in professional journals and several academic books through which he has emphasised the inter-relatedness of the spatial disciplines and the imperative to engage with the local cultural and ecological contexts while dealing with them.

Anjan Mitra is a practicing architect, urban designer and leads a design consultancy firm, The Appropriate Alternatives, based in Kolkata. It focuses on the holistic aspect of Development—propagating responsible architecture, sustainable practices—as well as covers the entire gamut of Design— product development, technological innovation, value addition, interior, architecture, landscape, urban design and project management.

Suneet Mohindru is a practicing architect and a landscape design expert. He founded 'Oracles', a landscape design, planning and conservation consultancy practice with a view to amalgamate intense theoretical background and passionate rigour. Academics are Suneet's strong parallel pursuit and 'Cultural Landscape' is his key area of interest. He has been associated with School of Planning and Architecture as a Visiting faculty, apart from taking special courses, electives and juries in various institutes.

In Discussions...

"The solution to any design issue should not come from out of the context, instead it should come from within the context. The problem should define what the solution is. Studio projects confine themselves to only pin-ups and critique, but competitions allow solutions and some are acknowledged. These contexts and sites take a back seat when designers are unable to realize their ideas in the real world. The role of designers completely diminishes when the stake holders (citizens and the politicians) have dreams and aspirations of their own. In India, as a society, we have a long way to go. We are poor in literacy, imagination, material and money. Therefore solutions to problems can be dictatorial and disastrous from the perspective of designers or vice-versa the users. Thus for architects stepping into practice, a good advice may be to think of design as a series of choices which address a particular issue and then to select the appropriate one. In a democracy, there can't be heroic solutions, only satisfactory ones.

In a digital age, students today have enormous exposure to such an extent that the role of teachers is diminished to mere facilitators. The real contribution of the teacher comes into play where the contribution to a subject becomes a lesson to be learnt and tested against various contexts with solutions by students. The classroom discourse in theory and design should help students evolve solutions that have responsible gestures towards society."

— A G Krishna Menon

"In the competition, entries that have addressed the context with heritage value through an essence or spirit befitting the site in the contemporary context overruled the other entries. The jury selected entries where the spirit was being honoured and thus enabling a very futuristic way of looking at design issues."

— Anjan Mitra

"Everybody cannot be involved directly with conserving the heritage, but lessons can be learnt on how a landscape designer can capture the spirit of various elements in nature from the past through meaning, through attitude towards nature in various periods of history or how open space and its surrounding context have been dealt with. We perpetuate values which are inherited because heritage is after all something that we inherited and it is something for prosperity which is our responsibility."

— Suneet Mohindru

FIRST PRIZE
Landscape for Reverence and Commemoration
Priya Sharma

Masters in Landscape Architecture
BNCA College of Architecture, Pune

SECOND PRIZE
Portals into Forgotten Knowledge
Shivani Vinod Kumar

B. Arch. (5th Year)
RV College of Architecture, Bangalore

THIRD PRIZE
Self Sustenance in Water: Reviving the Neher System of Aurangabad
Justin Mathew Thomas

B. Arch. (2017)
Kamla Raheja Vidhyanidhi Institute for Architecture, Mumbai

SHRIYA ANAND AWARD

Landscape for Reverence and Commemoration

Priya Sharma

A public green in a religious town with important Buddhist relics becomes the landscape canvas where important events from the life of Buddha are celebrated in diverse creative ways giving it distinct identity of a cultural landscape.

Preserving cultural continuum is imperative for the survival of tradition and heritage. Buddhism signifies mutual respect, coexistence, empowerment of ordinary people and connecting them to their inherent potential while pointing to the highest form of equality. The adopted approach exemplifies and creates a precedent to look at and effectively perpetuate intangible heritage through interpretation of associated values. Spaces within the landscape, egalitarian in nature, have an all-embracing inclusive quality, offering possibilities of congregation as well as solitary contemplation. An attempt is also made in developing an aesthetic order that captures the essence without parodying historical forms, thereby subtly breaking allegiance to a particular symbol that may tend to become singular in meaning. The idea deals with the intangible heritage, pertaining to land and people with a direct association with the cultural linkage to Shakyamuni Buddha, a significant spiritual pillar whose penetrating insight forms guiding principles for peaceful coexistence in the future times.

JURY COMMENTS

Understanding of the theme in relation to the historic, cultural, religious and ecological value of the site in a methodical and consistent way, right from the conceptual idea to the final design is the most positive attribute of the entry. Articulation of the central idea where the past gets connected with the present and future finds many creative interpretations. It is one of the very few entries that explore the idea of creating landscape setting by molding the land as per the natural topography. While demonstrating a maturity in spatial organization, the design has a geometry and order, yet comes across as a space that has a natural character. A balanced and well thought of presentation of the entry holds many lessons.

"The landscape design is an exploration of several 'endings' and 'new beginnings' in its spatial continuity creating a sense of journey, mystery and refuge leading to sudden panoramic destinations offering new perspective views, connecting to fresh streams, or episodic walks. The journey expressed through the created landscape embodies the richness of variety, experience, emotions, feelings and memory"

"If you want to understand the causes that existed in the past, look at the results as they are manifested in the present. And if you want to understand what results will be manifested in the future, look at the causes that exist in the present." (Writings of Nichiren Doshonin 1.279)

Preserving cultural continuum is imperative for the survival of tradition and heritage. The future would be anything but perfect if causes are not made here and how to interpret the past in the present in a relevant form.

The approach to this project exemplifies and creates a precedent to look at and effectively perpetuate intangible heritage through interpretation of associated values and presentation as a cultural space replete with relevant meaning for commemoration.

The prime significance of Buddhism that teaches mutual respect and coexistence is the empowerment of ordinary people, connecting them to their inherent potential and pointing to the highest form of equality based on Buddha nature. The landscape in response is egalitarian in nature. Spaces within the landscape have an all-embracing quality, offering possibilities of congregation as well as solitary contemplation.

At another level, care is taken in developing an aesthetic order for landscape elements that captures their essence or spirit without parodying historical forms, thereby subtly breaking allegiance to a particular symbol that may tend to become singular in meaning."

This exercise deals with the often ignored and less talked about intangible heritage that pertaining to land and people with a direct association cultural linkage to Shakyamuni Buddha, a significant spiritual pillar whose penetrating insight forms guiding principles for peaceful coexistence in the 21st century and beyond.

Life and its environment

Intangible

An attempt is made to help and empower people through (social forestry, productive landscapes, revival of mango grove) by community involvement exploring the possibility if conserving the past in present can be a tool for social empowerment and economic improvement.

Experiential walks, meditative settings, elevated landmarks, Groves, Forests and Symbolic Landscape features

Here and now

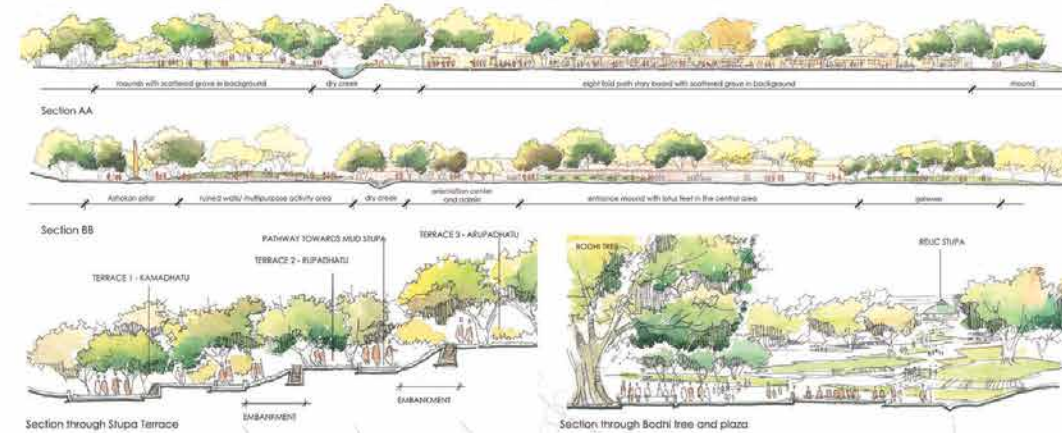

To cater to diversity of activities and users while separating religious from recreation, multidimensional spaces are created which are not only commemorative, but also serves as arena for various cultural activities, and contemporary recreational uses.

Landscape for Reverence and Commemoration
Buddha Smriti Van, Vaishali, Bihar

The sketch is compilation of journey of Buddha from his birth in Himalayas to his death in agrarian flat land of Kushinagar

Sculpting the landform

Commemorating
1. Life of Buddha (Cultural commemoration)
2. Objects (Relics, chakra, dharmachakra and coins having associative value)
3. Landscape setting associated with Buddha's life

The vantage, serenity of a towering life condition

The traverse (journey of duty life)

The valley of life and

"Walking through 'Smriti van' the idea is to create a landscape setting by sculpting the landform and using the vegetation and water creatively in order to impart it an individual identity."

2

Portals into Forgotten Knowledge

Shivani Vinod Kumar

Series of historic water catchments in the form of ponds, moat among others find a new life as an integrated design in the backdrop of a historic fort that is rejuvenated by diverse design means.

Should historic monuments be preserved retaining their original character of the time or can they be re interpreted and re appropriated to changing contexts? Does a connection remain between the growing city and its historic past or can the two exist relevantly as separate entities? Is there a role that historic entities can play in present times? The design aims to look at the historic structures not as stagnant entities but as elements that have lessons to impart. It takes the site of historic fort of Chitradurga to demonstrate the idea by conceptualizing a study and research center that translates the knowledge of the past into the context of the present. The study of traditional water management structures and systems to come out with diverse ideas to address water scarcity issues becomes an integral part of the proposal.

JURY COMMENTS

The design discusses the topical and relevant environment issues facing the country. It addresses the competition brief by looking at the past for clues of forgotten intelligence and wisdom while using historical references to resolve these present day urban concerns. On the way, it breaks the boundaries in a non invasive way to highlight the main idea.

Self Sustenance in Water

Reviving the Neher System of Aurangabad

Justin Mathew Thomas

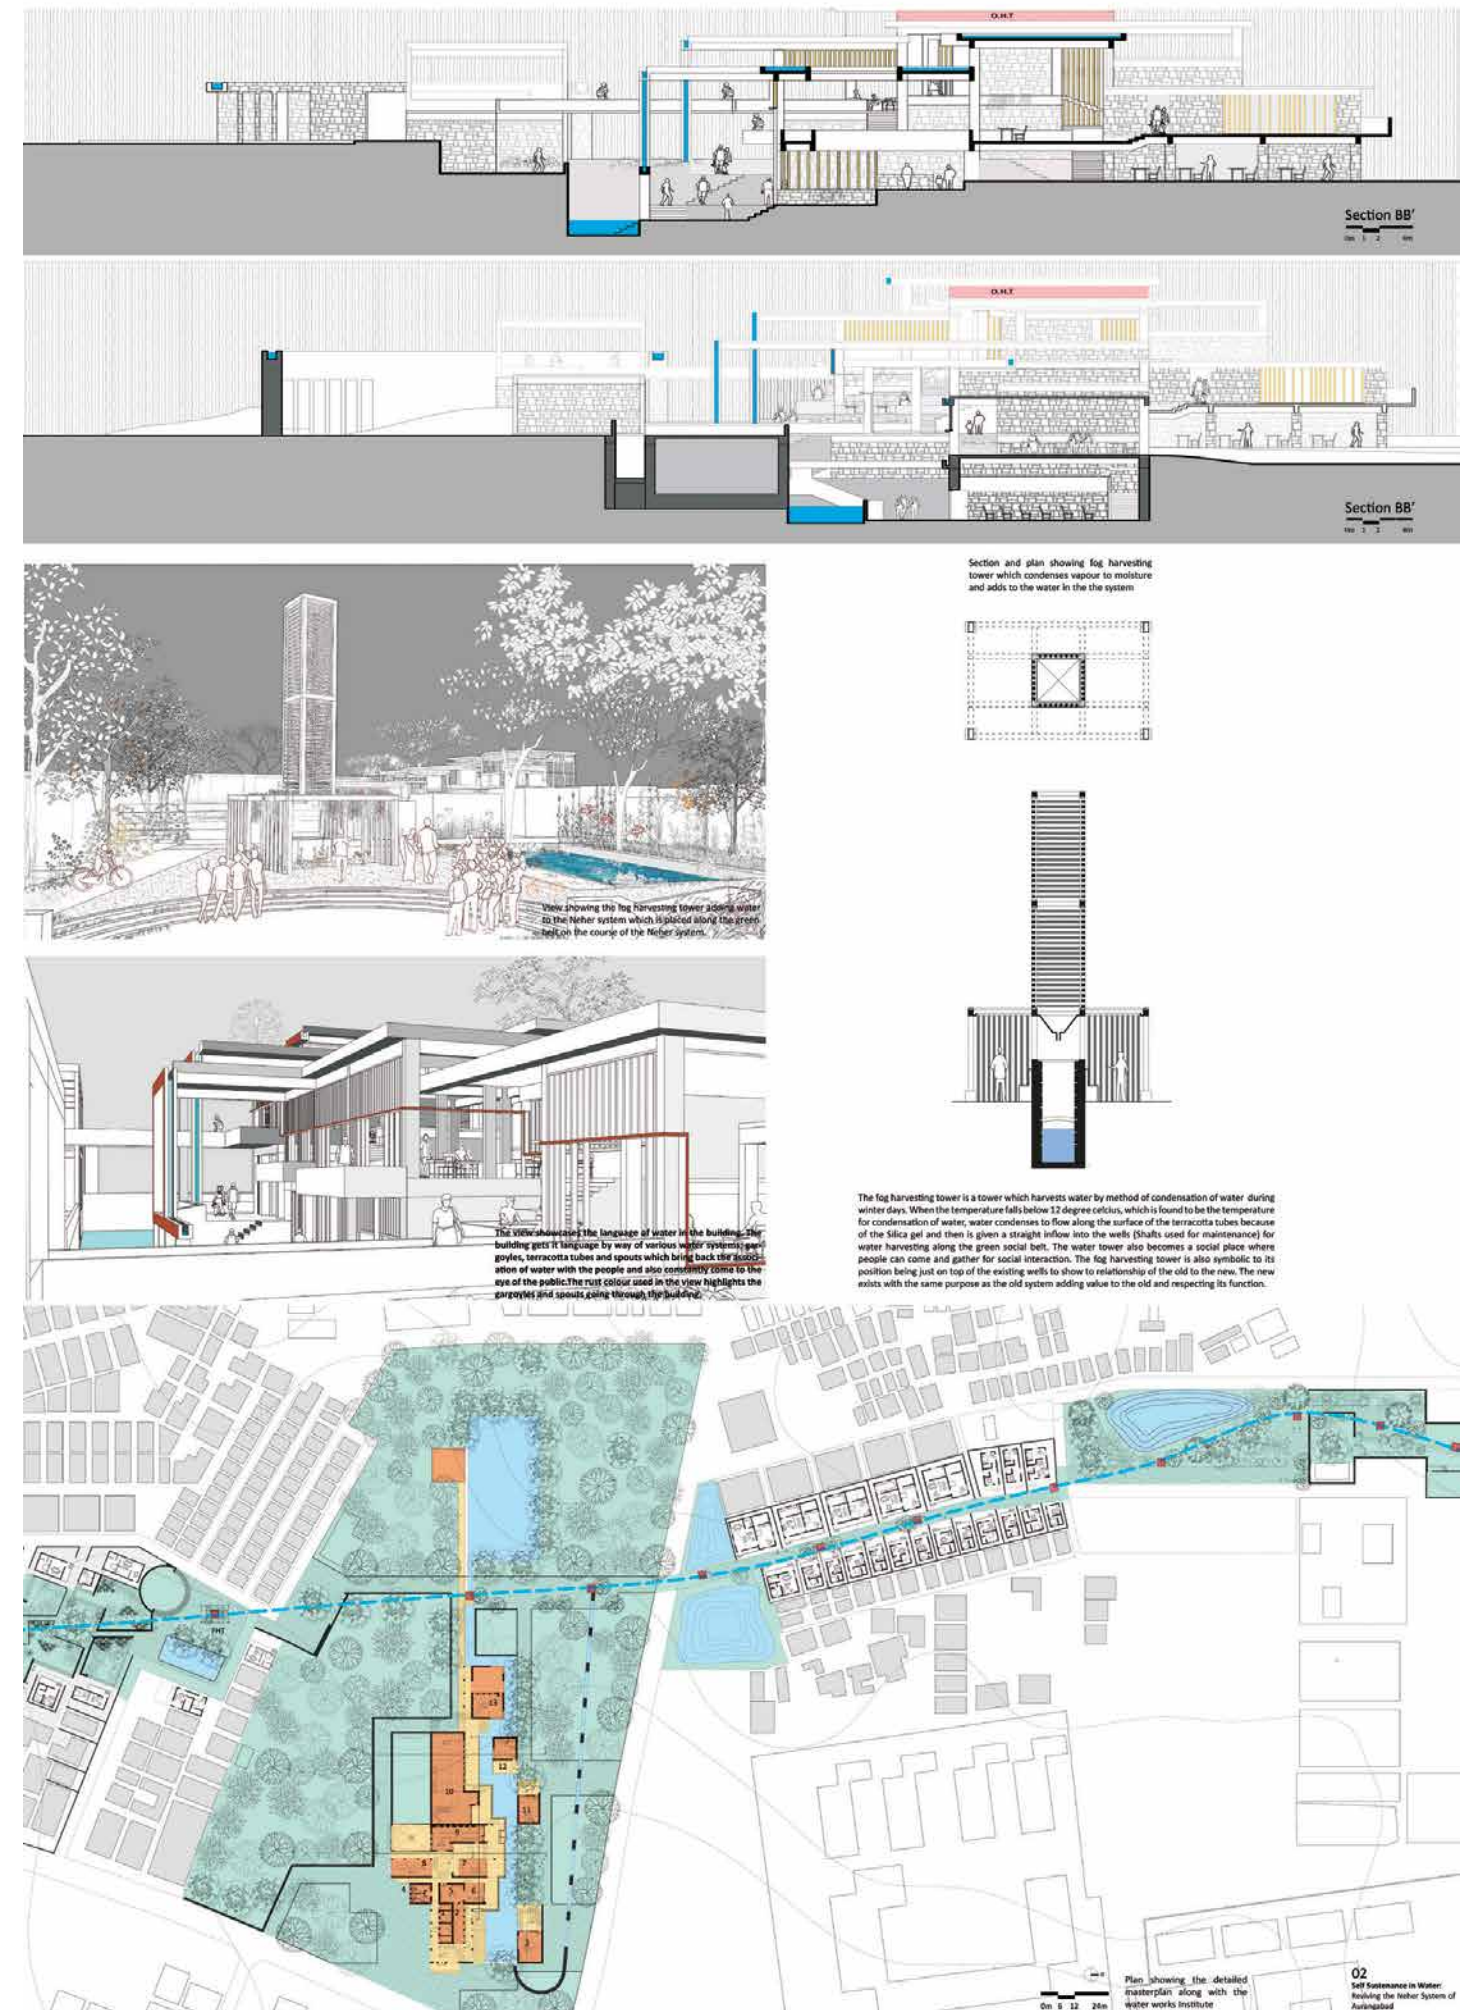

Contemporarizing a traditional water system by diverse means- reviving the process, conceptualizing and designing water structure with gargoyles, spouts, terracotta tubes and fog harvesting tower to bring back the association of water with people.

The Neher system of Aurangabad was designed and executed around five centuries ago. It provided water for more than three centuries. Due to the depleted water system along with several other factors, drought of the Marathwada region led to severe water crisis in Aurangabad.

The project is conceptualized to revive this indigenous system to make it part of everyday life. Neher-e-Ambari is chosen as the site for the master plan, envisioning a green belt and allowing for a series of active public spaces. The idea is to have a shallow water table level with retention ponds and greens along the system. The water works department, one of the programs along the system, uses locally available materials like basalt stone, concrete and terracotta tubes along the façade, forming the skin of the building. The water takes many forms in terms of harvesting, through roof, open gargoyles, spouts and water tanks at eye level. The water body brought out of the Neher through an aqueduct acts as a water museum to reveal the once hidden waters flowing through the underbelly of the city. It is then supplied to the communities by a common overhead tank under the supervision of the institutions. The institutes become nodal custodians for the supply of water along the system."

JURY COMMENTS

There is an attempt to understand the past wisdom through traditional water systems of indigenous settlements so as to arrive at possible ways of reviving, connecting and integrating them with the dense city fabric as part of the open space structure. The design captures the spirit of this lost knowledge while negating any form based solution.

Sabz Burj Plaza

Mayukh Raha, Karishma Rai & Madhulika Sanyal

Integrating the historic structures in a heritage zone with each other, while creating a seamless multifunctional pedestrian zone, hence changing the overall character of the space from a traffic intersection to a pedestrian plaza.

The unusual medieval structure of Sabz Burj looms over lakh of people who either travel or had on an occasion traveled on the ever-crowded arterial Mathura Road where it gracefully protrudes in the middle of a traffic roundabout, surrounded by other significant historic landmarks such as the Humayun's Tomb, Chausath Khamba and Nizammudin Dargah and Basti. It's striking presence in a prime position forces passersby and tourists to admire the beauty. Despite all this, the beautiful tower has garnered much less popularity than it ideally should have. The aim of the interventions is to intertwine these historic threads in and around this traffic island to create an active public space, create a tourist magnet and a congregational space for the public. The coherence of the historically rich circle has been utilized to give a platform to various urban activities in the open plaza, resembling an amalgamation of Delhi's cultural fabric, by weaving the past, present and future of the city.

JURY COMMENTS

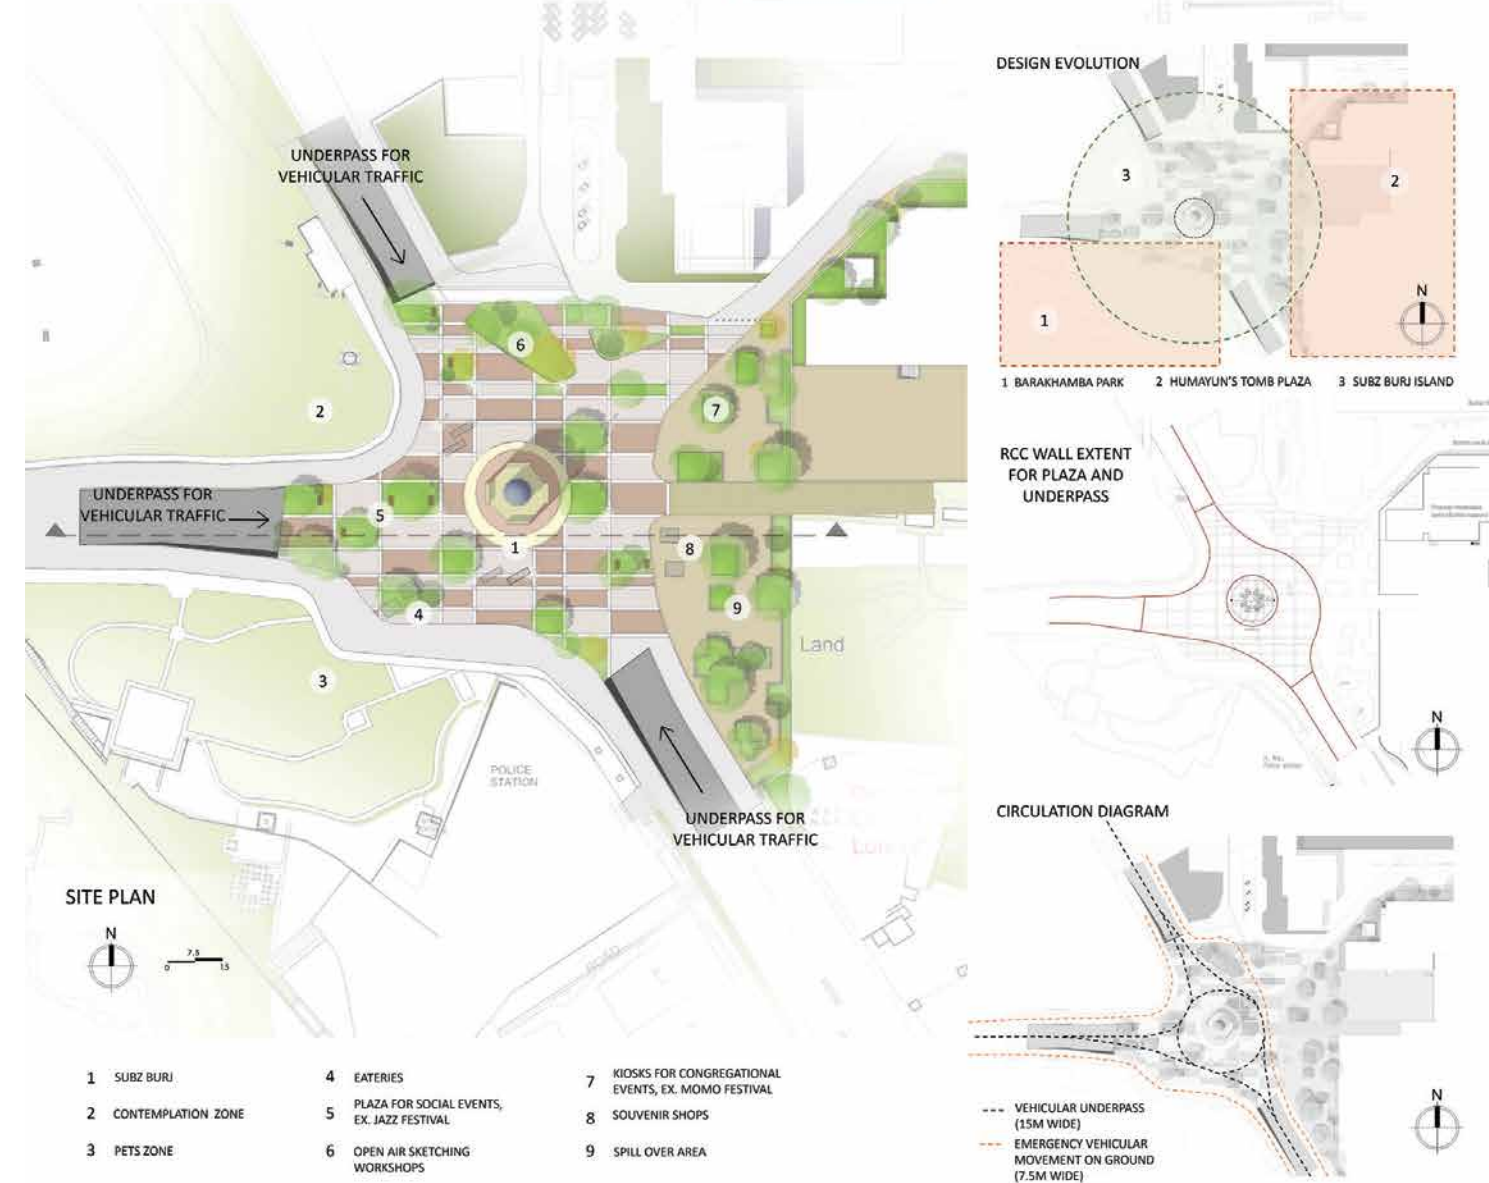

It adopts a bold idea of creating a harmonious blend of the heritage structure with the surrounding urban fabric, adopting a set of related principles and values. The idea would have been more impactful had it been translated in an equally strong design with elements on a smaller scale.

CONCEPT NOTE

Although only historians, heritage-enthusiasts and conservationists are concerned about the existence and condition of the enchanting Sabz Burj traffic island, the unusual medieval structure looms over millions of people who either travel or had on an occasion traveled on the ever-crowded arterial Mathura Road where it gracefully protrudes in the middle of a traffic roundabout, surrounded by other significant historic landmarks such as the Humayun's tomb and Chausath Khamba. It's striking presence in so public a space forcing passer-bys and eager tourists to grant it a second look and admire it with appreciation and amazement. Despite all this, the beautiful tower has miserably garnered much less popularity than it ideally should have.

The aim of the interventions are to intertwine these historic threads in and around this traffic island to create an active public space to act as a tourist magnet and a congregational space for the public. The coherence of the historically rich circle has been utilized to give a platform to various urban activities in the open plaza, resembling an amalgamation of Delhi's cultural fabric, by weaving the past, present and future of the city.

Watershed Management for Melukote

Chandana Keshava Murthy, Manu M & Vijetha C P

Various creative manifestations of nature conservation in the realm of culture define the character of a religious traditional town with sacred groves, forests, stepped tanks and water structures forming the site assets.

The sacred town of Melukote is an excellent example of traditional water harvesting practices. The system that came into practice hundreds of years ago still exists and can be used as an example in the formulation of water conservation and management practices for today. Step wells have made significant contribution in enhancing the charm of the pilgrimage town. Among them the *Panchakalyani* is the most important *teertha*, and is a major center of attraction. Earlier the step wells served people for religious purpose and day to day water requirement. The proposal calls to design watershed management strategies for the town by reviving the existing step wells which have become defunct due to various factors, to restore the health of the lake and to provide environmentally positive buffer spaces in the public areas.

JURY COMMENTS

The idea is able to establish a process to deal with the issue on a micro level. However, its further progression to prove its relevance on the larger regional context in the surroundings remains unrealized.

Deulwadi An Urban Oasis

Nidhi Kapri & Manoj Sharma

A minimalistic approach towards enhancing a sense of identity of a religious precinct, now engulfed in dense urban fabric by strategically siting cultural elements and creating linkages with adjoining public areas, streets and railway station.

A century and half old Deulwadi temple complex in the suburb of Chembur is laid out within a large paved compound. It has extended its boundaries to a socio-cultural precinct used by the neighborhood. Group of temples evolved slowly with time around it. It has become significant within the hub of the city of Mumbai, beyond its boundaries of community and religion yet maintaining its uniqueness to serve as a socio-cultural space in people's lives in the neighborhood of Chembur. The character and distinctiveness of the precinct makes it unique due to both ground hugging built forms and serene spaces within, though completely lacking in standing loud amongst the growing thick dense fabric of buildings in the surrounding. The design approach re accredits the feeling of serendipity which adapts a tangible link with the past and keeps the inherent experience of an oasis in urban area while allowing for change and innovation to meet present day and future requirements.

JURY COMMENTS

It is a good attempt to address one of the relevant and current issues that Indian cities face. It would have gained more value if its relationship with the surrounding context had also been explored.

Text of the winning entries by the respective teams

DEUL WADI TEMPLE COMPLEX

Google image of the site

HERITAGE STRUCTURE (ONLY TEMPLES 1, 2 & 3)

LEGEND:
1. Temple shrine 01 (heritage structure)
2. Temple shrine 02 (heritage structure)
3. Temple shrine 03 (heritage structure)
4. Temple trust offices and residences.

The main street to the east of the temple complex is very busy because of its connectivity to the Chembur railway station and Chembur naka. It also connects the Mono rail through the temple complex.

New highrise development being the immediate surrounding, hides the temple complex completely. This gives a sense of losing identity of the area which is apparently, the only left replica of the vernacular city.

The temple complex in itself is an absolute disconnect from the restful city of today. The traditional setup of the whole complex evokes emotions of calmness, relaxation and peacefulness.

The rare entrance below the monorail station towards the west of the temple complex.

SCHEMATIC DEVELOPMENT OF THE TEMPLE BUILDINGS AND COMPLEX OVER PERIOD OF DECADES:

STAGE - 01 STAGE - 02 STAGE - 03 STAGE - 04 STAGE - 05

Street painting as directive towards the temple complex.
Existing Skywalk
Existing monorail station
Proposed pathway to the monorail station
Proposed crossing
Existing pathway to the Monorail
Proposed Deep Stumbh at the junction of the road. To accentuate / emphasize on the existence and identity of the place.

THE SITE

It is very Strategically located as it abuts the 1st monorail station which is an important infrastructural development of present and future. Also it is bounded by two roads one of which is main road and the other being the internal and in Gaathan vicinity.

Surroundings settings are both urban & rural having strong character of each type.

Influence on daily life The temple complex has also become a transition space in the daily life of people as people commute daily through this complex on their way to work and back and also acts as a place of rest or pause in their transition.

Multiple layer of activity : It also serves as a social gathering space and a social interaction space. Thus the precinct has extended beyond its original religious boundaries to a socio-cultural space. (Past to Present)

Public/Open spaces in the complex expressing the NOW & THEN. The gaathan has a very strong socio-cultural outlook and the residents are strongly affiliated to the Bhulingeshwar temple present in Deulwadi. There are many religious and cultural activities which are special to the gaathan

Historic Character / significance of the place still prevails. (Built area has its own vernacular identity). It is not only a religious place but now has extended its boundaries to a socio-cultural precinct used by the neighbourhood

Cultural Legacy / Cultural History -- People relate and identify this space as an important part of their neighbourhood.

CONCEPT...

"Heritage is so much more than 'old stuff' -- it encompasses all those things from the past which are valued enough in the present to save for the future."
...anonymous

The 150 year old DEULWADI TEMPLE complex, important to the suburb of Chembur is laid out within a large paved compound. Many religious discourses are organized here and has extended its boundaries to a socio-cultural precinct used by the neighbourhood. Group of temples evolved slowly with time identified as a GRADE-II Heritage structure, has now become significant within the hub-of-a-city, beyond its boundaries of community and religion yet maintaining its uniqueness to serve as a socio-cultural space in people's lives in Chembur.

"Preserving our heritage does not mean that it must be frozen in time, heritage is dynamic and changing, and provides an opportunity for innovation rather than an opposition to progress."
...anonymous

The character and distinctiveness of the precinct makes it unique due to both ground hugging built forms and serene spaces within, though completely lacking in standing loud amongst the growing thick dense fabric of buildings in the surrounding.

So our approach is to nurture the past

1. Re-crediting the feeling of serendipity which is by adapting a tangible link with the past.
2. Keeping the inherent experience like an Oasis in Urban area while allowing for change and innovation to meet present day and future requirements.

Nidhi Kapri Manoj Sharma says "We can't address the future. We can't look after the past."
